Blue Horizons
200g Chlorine Tablets

Key Features
- A long-lasting, 200g chlorine tablet
- High chlorine content – economical
- Stabilised to minimise chlorine loss to sunlight

Ideal free chlorine range: 1 – 3mg/l

Maintain pH level within the ideal range of 7.2 – 7.6. If not in this range, adjust.

As this product releases chlorine relatively slowly, it may be necessary to shock dose the pool prior to its use to establish a free chlorine level more rapidly.

Application Instructions

Warning: Do not add tablets directly to a pool. Always dose via a dispenser/chlorine feeder or skimmer basket.

Skimmer: Place one tablet in a clean and empty skimmer basket per 45,460 litres (10,000 gallons) of pool water. Adjust tablet numbers if necessary to achieve ideal free chlorine range of 1 – 3mg/l.

Floating Dispenser: Add tablet(s) to the (trichlor) floating dispenser and adjust the flow mechanism at the base of the dispenser to obtain the free chlorine range of 1 – 3mg/l. Alternatively, leave the flow setting on the dispenser, but vary the number of tablets inside. **Note:** The dispenser should be removed while the pool is in use.

Chlorine Feeder: Few chlorine tablet feeders take this 200g tablet and the 20g tablet may be a better option. However, if appropriate, fill the dispenser with tablets and follow the instruction manual on flow regulation to maintain free chlorine levels of 1 – 3mg/l.

Note: It is recommended that you periodically (e.g., weekly/fortnightly) shock dose your pool using Blue Horizons Pool Fusion, Rapid Shock or Granular Shock.
