Blue Horizons

Concentrated Winter Time

Key Features

- A long-life, copper-free winter algaecide
- Compatible with a wide range of sanitisers

Application Instructions

1. Ensure pool water is clear and free from algae and debris before applying this product. This will enhance the longevity of the product.
2. Shock dose the pool using Blue Horizons Granular Shock or Rapid Shock to achieve a free chlorine level of 10mg/l.
3. Gradually pour the required amount of Blue Horizons Concentrated Winter Time into the pool whilst the pump(s) are turned “on” preferably near the water inlets to aid distribution.
4. Check the pH level and if necessary, adjust to achieve the recommended winter pH range of 7.6 – 7.8.
5. Keep the circulation system running until Blue Horizons Concentrated Winter Time is thoroughly distributed throughout the pool.
6. If the winter and spring are mild, it may be necessary to periodically shock dose the pool water with chlorine. This will help to keep the pool clear as the air temperature starts to rise.

Litres	Gallons	Dose rates
4,546	1,000	85ml
11,365	2,500	210ml
22,730	5,000	415ml
45,460	10,000	830ml
68,190	15,000	1.25ltrs
