Blue Horizons
Rapid Shock

Key Features

- A powerful, fast-dissolving oxidiser
- High chlorine content – economical
- Destroys swimmer wastes
- Helps prevent/kill algae
- Stabiliser-free

Application Instructions

1. Maintain pH level within the ideal range of 7.2 – 7.6. If not in this range, adjust.
2. Maintain free chlorine level within the ideal range of 1 – 3mg/l. Shock dosing is recommended either weekly or fortnightly with a maximum free chlorine increase to 10mg/l for a full shock dose.
3. If the water temperature is 20^{0}C or higher and a minimum water depth of 4ft, this product can be carefully broadcast directly over the pool surface. Always check the wind direction before applying.
4. Alternatively, pre-dissolve this product in a clean contain at a maximum rate of 100g per 10ltrs of clean warm water. Stir well to ensure product is fully dissolved, then add solution to the pool with the filtration running.
5. Repeat dose if necessary to achieve the desired level.
6. The pool water may become temporarily cloudy after application, so keep the filtration running until this clears.
7. Allow the free chlorine level to drop to 5mg/l or below before bathing recommences.

Litres	Gallons	Dose to increase chlorine by 1mg/l	Dose to increase chlorine by 5mg/l	Dose to increase chlorine by 10mg/l
4,546	1,000	7g	30g	60g
11,365	2,500	15g	75g	150g
22,730	5,000	30g	150g	300g
45,460	10,000	60g	300g	600g
68,190	15,000	90g	450g	900g
