

AquaSParkle

Hardness Plus

Key Features

- Granular calcium increaser

Low calcium hardness (CH) can result in corrosive hot tub water which over time may be damaging to your hot tub and equipment. AquaSParkle Hardness Plus will rapidly increase the calcium hardness when levels fall below 100mg/l (ppm).

Target CH range: 100 - 200mg/l (ppm)

Application Instructions

- 1) Test the calcium hardness of your hot tub water. If it is below 100mg/l, apply Hardness Plus.
- 2) Pre-dissolve Hardness Plus in cold water using a suitable plastic container.
- 3) Stir well, then carefully add to your hot tub water with the pump(s) running to aid distribution.
- 4) After a minimum of 15 minutes, retest the calcium hardness level and add a further dose if necessary.

Litres	Gallons	To raise CH by: 10mg/l	To raise CH by: 25mg/l
1,000	220	15g	38g
1,500	330	23g	56g
